

How to take your project and make an application running online:

- Go to <http://meteorpad.com/pad/Ah4tEGSG83iaoEKtj/Survey%20Form>, and click on 'Save Copy'.
- Click in the 'My Form' field and name your project to match the application.
- Copy your form into the template called “form”.
- In /client/app.js, find “Template.form.events({...””, and then do the following:
  - change the IDs in the \$('#ID').val() to match the ids you used in the form.
  - Change the names of the variables to match the information you are collecting from the user
  - change the properties in the newDocument variable to match the variables you just named
- In the template called “results”, change the names in the double braces (like {{name}},{{gender}}) to match the properties in your /client/app.js file.
- Select 'Save' at the top of the screen.

The window on the right hand side will reload. You should see your form there. Enter some values and test it out!
